

# Frame Over DSL

# DSL

**AMERICAN TELESIS**  
Private Line & Network Specialists

## **Cost Effective Networking**

By blending DSL, ATM and frame relay technology, we can considerably lower the cost of your multi-site connections. Our new FRoDSL service is perfect for companies who currently use frame relay services, but would like to explore lower cost network options. American Telesis FRoDSL is equally competitive to national frame solutions from AT&T, MCI and Sprint and regional frame relay solutions from your local telephone company.

## **Business-Class Service**

American Telesis offers carrier class SLA in order to deliver the service and support your business needs. We provide a high quality, inexpensive solution backed by a rock solid SLA. How could you go wrong?

## **Single Provider with Incredible Flexibility**

Tired of trying to create one network through multiple providers? Save time and money by partnering with American Telesis. Whether you are connecting a single remote user or an array of offices, our FRoDSL solution offers a variety of options at incredible prices!

## **Seamless Virtual Network**

Connecting telecommuters, branch offices and remote users via FRoDSL provides the equivalent of a frame relay network at a fraction of the cost and with virtually identical network performance. Because American Telesis utilizes the largest network of its kind in the nation, we are able to deliver the most attractive dedicated FRoDSL solution in the market today.

## **Scalable Solutions**

American Telesis can help you with everything from initial network design and CPE configuration, to ongoing maintenance and support. As your business grows, we can provide incremental bandwidth and value-added services. Additionally, because of the number of POPs in our network, American Telesis brings you greater national penetration at a much lower price than other carriers.

## **Blended Networking Solutions**

American Telesis FRoDSL products can be combined with a full suite of other multi-site options. Our frame relay, ATM and IPVPN services blend seamlessly to create the most flexible networking package available from any national carrier. Better yet, if you have an existing frame relay network, you can often re-use your existing equipment and configuration with minimal disruption to your existing network by selecting our special frame relay delivery option.
