

Traders & Brokers

Stocks, Bonds, Commodities, Gas, Oil, Auto and Plane parts

Automatic Ring Downs, Manual Ring Downs, Forked Ring Downs and Hoot'n'Hollers tend to evoke emotion with these highly specialized industries, and probably for all the right reasons. These private line circuits define their daily success or failure. Consequently, failure can reverberate with their clients for quite some time.

American Telesis has provisioned Ring Down and Hoot'n'Holler installations for these environments since 1992. Our expertise is unchallenged. We are the company to get the job done.

Traders and Brokers typically require T-1 hubs at their main location which we then DACs at our POP down to 24 DS-0s and terminate individually at the customer's location. Often we already have T-1s at the far end which allow us to provision the circuit POP-to-POP once the hub T-1 loop is installed. We are willing to control the channel assignments for the customer regardless of who ordered the T-1 or T-3 into the headquarters. We are also willing to accept Channel Facility Assignment (CFA) and meet the customer on their existing T-1 or T-3 at the Central Office or competing POP.

American Telesis provisions these circuits over our network giving us more control along with a preferred pricing advantage. Financial and oil hub locations are cities in which we have substantial network and resources. We do not stop at simply delivering a circuit within specifications; we do whatever it takes, working with the customer and their technicians, to insure that they have their network functioning properly. However, our job does not end here.

Once the circuit is up and running effectively our Maintenance Department takes over. It is often at this point that a telecom company will either wither on the vine and never get any additional business or grow and prosper because the customer knows they have professionals troubleshooting their critical network outages. We hang our hat on our specialized maintenance technicians who often will get the circuit or network up in a substantially shorter time than any other Carrier Maintenance group. There will be problems, and some may take longer than we or the customer would like, but if the maintenance group handling them is well trained and truly dedicated to helping the client, they are invaluable to everyone's success. We have such a team!

You should feel not only comfortable with an American Telesis solution, but confident and excited. We are the right-size company for you and for the Trader/Brokerage firms. American Telesis is financially sound with no debt and has been EBITDA positive every quarter since inception. We do not use auto-attendants, we provide knowledgeable account teams that take the time to understand your business environment.

Experience the professional company
that exceeds your expectations.

Innovative • Dedicated • Progressive
